1 PROBLEM		3 SOLUTION		2 UNIQUE VALUE PROP		7 UNFAIR ADVANTAGE		1 CUSTOMER SEGMENTS			
THE REAL PROBLEM Someone's job is gone. They can see job titles. They cannot see the evidence they already have, the smallest skill gap, or a short next step that makes them interview-ready. Ireland already assessed them. They get a course list. Next appointment is about three weeks. In those silent weeks the plan lives only in their head. The adviser cannot choose the next job for them. This quarter: ~700 contractor roles gone (Covalen / Meta). Meta Ireland ~20% down (Bloomberg / LA Times, Jul 2026). Already sitting in that system (not a made-up market): Live Register Aug 2026 182,517; 127,708 of them less than a year; 29,956 more on activation programmes (CSO, 4 Sep 2026). Why now: ~850,000 people in Ireland sit in jobs AI will change (30% of 2.83m). Unemployment is only 4.4%. The shock is inside work. Money already in the sitting: JobPath paid contractors €249.1m (2016–20) + €42m to wind down — people still left with a list. Historic. Not this year's invoice. WHAT THEY DO INSTEAD • Wait — the default. • ChatGPT — more lists. That is the broken handoff. • Another catalogue. Springboard+ 2026: 7,274 places, 244 courses. Training exists. The sitting still ends on a list. • Big-company talent software: months of setup. Not this office. Heard (Sep 2026): sat with an adviser. She cannot decide for the applicant. Not a customer. OPEN: a booked sitting. Current-year office invoices.		ONE SITTING. INTERVIEW-READY. Same CV the office already has. We wrap the meeting. We do not take their diary or their jobs board. 1. Evidence — they confirm what they did. Skip is free. Nothing used until they say yes. 2. Sharpen — two or three questions. “Managed stock” → 2,400 SKUs, a tool, a date. 3. Two jobs they pick. Named gap = one real Irish course (Skillnet / SOLAS / Springboard+), not 200. 4. The board — confirmed stories, likely questions, one step this week. They walk out holding it. We propose. They choose. We do not rank people. OPEN: public walkthrough is still a mock.		“Everyone else hands you a list. We hand you proof.” Proof = confirmed evidence + a named gap + they leave interview-ready (the board they take into the room). Ireland already assessed them. The product is not a better list and not a better assessment. It is what they walk out holding. For the office: you still run the appointments. We make the three weeks count. You are not asked to pick their job. Not a jobs website. Not a test. Not a ranking of people. Not ChatGPT on a CV. You are buying a sitting that produces an artefact — not a chatbot seat. Picture it: a warehouse CV that says “managed stock” walks into an interview able to say the number, the system, and the date — and which of two honest next jobs they are aiming at. OPEN: we will measure, not claim: they come back to the next appointment holding a board they wrote.		WHY A LIST-MAKER CANNOT DO THIS Nothing is used until they confirm. Skip is free. The board only prints what they said was true. We will not invent a story for the interview. HR in the room holds that line. One CV, one sitting. Big talent platforms need months of company setup first. Honest: a bank with an AI team can copy the screens. We start with offices that still hand out a printout. Sitting results are the moat — we do not have them yet. OPEN: one adviser who will sit. A conversation (9 Sep) is not a booked sitting. Outcome data is the real moat.		USER / BUYER User: job gone or about to go. Practice CVs (not real people): warehouse worker after a long spell in one site; a strong worker whose qualification does not map cleanly to Irish job titles. This quarter: ~700 Covalen roles. Buyer: the small employment office the State already pays to see them (~every three weeks). The person never pays. Early adopter: the adviser who already runs the sitting and hates sending them out with a course list. First door: Ireland, that kind of office. Conversation 9 Sep (Enniscorthy). Not a signed customer. No logo. Next: another office of the same type. Later, same four steps: a training programme or a union room. Not first: a bank's HR team, or an app people buy. Same sitting: any room that already assesses, then leaves them with a list. OPEN: a sitting in the diary. An office that can try ~20 people without a year of paperwork.			
5 COST STRUCTURE				5 REVENUE STREAMS							
NOW Two-week challenge team. Practice CVs, not live case files. Organiser model credits. A sitting is cheap to run. No fine-tune. No second product. LATER Teach the office. Keep the Irish course list current. Extra care (and a privacy review) when a real adviser touches real people. Cost of running many sittings. Time to the first office that can sign without an HQ AI programme.				THE PERSON DOES NOT PAY. Today: €0. We sell the sitting to the office, not a phone app. No invented ARR. Pilot: free, one group, practice CVs first then about 20 people. Measure: did they come back with the board? Then: the office pays per sitting or per adviser. Price after we see it work — not a fee ladder from an old scheme. Later: same offer in other countries. Same product. Swap the course list. Not this year: a paid consumer app, or selling into a bank that can build this itself. OPEN: one office that can try ~20 people without a year of paperwork.
