WHO HURTS, THIS WEEK The worker just told their role is gone — and the adviser who sees them once every ~3 weeks. Visible cases: Meta's Irish workforce ~20% down; ~700 Covalen contractor roles gone. Scale (problem slide, not a CSO pitch): Live Register Aug 2026 182,517 already counted; 29,956 on activation programmes on top of that. Most on the register <1 year. Already assessed. Still leave with a list. Why it matters: ~850,000 people in Ireland sit in jobs AI will meaningfully change (30% of 2.83m; Bloomberg 2026 × CSO Q4 2025). Unemployment is only 4.4%. The shock is inside employment. What they get today: assessed → course-list printout → silent weeks. JobPath already cost the State €249.1m (2016–20) + €42m to wind down — and still left them alone with a list. ALTERNATIVES (incl. doing nothing) • Do nothing / wait for the next slot — the default. • ChatGPT / generic LLM: keywords + courses. That is the broken handoff. • Assessment PDF / course catalogue (FIT, ReBOOT, Skillnet): training exists; the sitting still ends on a list. We wrap it; we do not replace it. • Gloat / Fuel50 / TechWolf + €300/seat HRIS: need a job architecture and an AI team. Not the beachhead. OPEN: one named quote from an adviser or ETB. Price the silent weeks (€/head). Confirm 2025/26 Intreo Partner invoices before quoting this year's spend.		They leave holding proof, not a printout. We use the same CV the adviser already has. Nothing is used until they say it is true. Skip any question — no penalty. Two or three questions turn a weak line into something they can prove: a number, a tool, a date. Then two roles they can already reach. Not a job board. They pick. If a gap is real, we name one Irish course that closes it. They walk out holding a board — stories they confirmed, questions they can practise, one step this week. The adviser's appointments and job board stay theirs. Live: skillsatlas.vercel.app (wireframe). OPEN: working app not on that URL yet.		“Everyone else hands you a list. We hand you proof — two roles you can already reach, confirmed by you, with a board to walk into the interview holding.” Evidence agent for Irish restructuring. Not a recommendation engine. Not ATS keywords. Not a personality test. Not a job board. LLM drafts. Agentic orchestration (BPMN + code) decides what is allowed. The person confirms. Exactly two ESCO routes. Humans decide. We do not rank people. No job architecture required. We run one person against ESCO on day one — the office that will never plug into Gloat. High concept: Agentic redeployment with an audit trail — confirmed evidence, transferable skills, a plan they can afford, STAR they can carry into the room. Flip interview setting: same evidence, different questions. Every line traces to a CONFIRMED claim. GDPR-shaped by architecture (no protected-trait fields). Demo uses synthetic personas. Not this week: consumer download, internal-mobility platform, more-than-two roles on screen, a fine-tuned model. Same product abroad: swap the catalogue. ESCO stays. Year 2 after Ireland copies. Enterprises can copy this — we sell to the office with no AI team. OPEN: freeze the one-breath line with the presenter. Pilot metric (not a claim): share who return to the next appointment holding a self-authored board.		HARD TO COPY (not the model) • Trust as a gate: nothing used until they confirm. Skip is free. A caseworker can allow it — it cannot override their judgement. • Governance as code: OBSERVED / REPORTED / PROPOSED / HUMAN REVIEW. Never-invent. Two unranked routes. • ESCO pin — no pre-built job architecture. Day-one usable where Gloat cannot land. • Every [AI] wrapped in a [CODE] guardrail. Fail → retry once → drop the claim. • HR in the room (Brigitte) without a competency-matrix product. Honest moat: outcome data from a live sitting. Thin today. Compounds if an Intreo Partner office copies. Fine-tune parked. OPEN: named champion adviser. First sitting that copies without us in the room.		INITIAL CUSTOMER (this fortnight) User: worker whose role is gone or about to go (warehouse, contractor, qualification-gap). Demo: two synthetic personas. This quarter: Meta / Covalen (~700). Buyer: small / mid-tier Intreo Partner office — Turas Nua as <i>context</i> (not a logo-as-customer), Seetec as the verified twin. ETB adult guidance, smaller outplacement. Printout + 3-week gap. No internal LLM. Worker does not pay. Early adopter: the adviser who already runs the sitting and hates sending them out with a course list. Not this week: corporate HR / internal mobility (Gloat's market). Not a consumer app. Age / gender / immigrant are not schema segments — ReBOOT etc. are rooms. LATER DOORS (same URL, different sentence) FIT / Women ReBOOT / Back to Work Connect. Unions (SIPTU / Fórsa) after the hub — not Hub traction. EXPORT CUSTOMER (Year 2) Same pair: jobseeker + PES counsellor / contracted provider. 32 PES. All EURES countries have mapped or adopted ESCO occupations (Oct 2025); the <i>skills</i> layer is still uneven — that is the gap we sell into. Not first: LU / BE-VDAB / SE. Not first: UK (SSC). Not a consumer download in any country. OPEN: name one reachable Irish adviser this week. Log date, role, what they said. Do not put a provider brand on a slide as a customer.

COST STRUCTURE					REVENUE STREAMS				
NOW (challenge build) Organiser OpenAI credits · two pinned LLM tiers (cheap extraction / expensive route-reasoning only) · ESCO v1.2.0 free · Vercel Hobby · Supabase EU · Camunda as a drawing, not a cluster. ~6 structured LLM calls / journey = cents. Synthetic data. No custom auth. No fine-tune (no labelled outcome data). No second agent framework. Two-week team. LATER DPiA when a real adviser touches data · catalogue ops per country · adviser training · API cost at 200 sittings · sales time to the first office that can sign without an HQ AI programme · production Camunda 8 only if a buyer wants Operate-grade audit · fine-tune only after real placement outcomes exist.					HOW IT MAKES MONEY Worker does not pay in activation. Today: €0. We sell the sitting, not a consumer SaaS. B2C free tool is awareness later — not a second canvas. No invented ARR. Pilot: free, one cohort, synthetic-first then a real sitting. Measure: boards in hand at the next appointment. Then (Ireland): case / seat licence to the small/mid-tier provider, ETB, or outplacement team — price after the pilot. Then (export, Year 2): same licence to contracted PES / activation offices. Same SKU. Local catalogue. No second product. Parked SKUs: union member benefit; outplacement white-label. After the Ireland sitting copies — not this fortnight. OPEN: one office that can sign ~20 people without national procurement. Do not quote a JobPath fee ladder on stage until a current source is in evidence-base.md.
