

1 PROBLEM THE REAL PROBLEM A CV, vacancy or course list can point at another title. It does not show the confirmed evidence, the specific gap, or one next step that makes the route credible. The worker still has to explain what they actually did. The professional beside them can guide, but the worker confirms the evidence and chooses the route. Visible transition: about 700 Covalen / Meta contractor roles cut in Jul 2026 (Bloomberg / Los Angeles Times). System context: Live Register Aug 2026: 182,517; activation programmes Jul 2026: 29,956 (CSO). Not a TAM and not proof of demand. WHAT THEY DO INSTEAD • Apply from a vague CV claim. • Search long job and course lists. • Use general interview tools without a confirmation trail. • Use large talent systems that require organisation-wide setup. Field conversation: evidence beyond keywords and two constrained routes landed. Not a customer or pilot. OPEN: one hosted sitting, buyer authority and workflow fit.	3 SOLUTION ONE SITTING. CONFIRMED PROOF. Same CV. SkillsAtlas supports the professional across the table; it does not replace the meeting or job board. 1. Evidence — confirm or skip. 2. Sharpen — 2–3 focused questions; review stronger wording. 3. Two routes — unranked; worker chooses. 4. Interview Board — route-specific story, question example and one step, saved as PDF. OPEN: production AI pipeline and verified provider catalogue.	2 UNIQUE VALUE PROPOSITION “A list gives you options. SkillsAtlas gives you proof.” Proof = worker-confirmed evidence + a named gap + one next step + a SkillsAtlas Interview Board. The product is not a better assessment, job board or catalogue. It makes the worker's evidence usable in one candidate-present sitting. For the host: keep the existing meeting and systems. SkillsAtlas structures the evidence conversation and produces a take-away artefact. Not a test. Not candidate ranking. Not recruiter-alone CRM search. Not a consumer app in the current model. Example: “managed stock” becomes a number, system and date only after the worker confirms the stronger wording. OPEN: whether the Board is useful in a hosted sitting and whether an organisation will pay.	9 DEFENSIBILITY WHY THIS IS NOT A GENERIC CHAT Original words are preserved. Extracted and strengthened wording require worker confirmation. Skip is free. Routes are limited to two and remain unranked. The Interview Board may use only confirmed evidence. Existing meetings, recruiters, job boards and catalogues stay. Honest: the screens can be copied. Workflow fit, trust and evidence outcomes would have to become the moat. OPEN: real outcome and willingness-to-pay evidence.	4 CUSTOMER SEGMENTS USER / PROPOSED PAYER User: a worker whose role is gone or about to go. The prototype uses a synthetic warehouse CV. Proposed payer: an organisation already hosting a candidate-present transition or recruitment sitting. The worker does not pay. Room A: worker + employment or outplacement adviser. Room B: candidate + mid-tier recruiter. Same four screens; different professional across the table. Not this product: recruiter-alone CRM search. It needs separate discovery on access, privacy, consent, integration and buyer value. Field status: one Enniscorthy conversation. Not a signed customer, pilot, logo or price signal. OPEN: buyer authority, workflow fit, privacy requirements and willingness to pay in each room.
7 COST STRUCTURE NOW Two-week challenge team. Practice CVs, not live case files. Existing static prototype and film. Organiser model credits. No new film and no second product. LATER Production build, verified learning catalogue, host onboarding, privacy and security review, model and storage costs, evidence-quality monitoring, and support.	6 REVENUE STREAMS THE WORKER DOES NOT PAY. Today: €0. No customer, pilot, price or willingness-to-pay evidence. Proposed model: the organisation hosting the sitting pays. Test adviser-host and recruiter-host buying separately. Validation sequence: practice data → agreed hosted sitting → workflow and privacy review → price research. Do not assume per-sitting or per-seat yet. Not this year: paid consumer app, national tender, recruiter CRM search or invented ARR. OPEN: buyer authority, procurement route, deployment constraints and willingness to pay.
