1 PROBLEM WHO HURTS The person who just lost their job — and the adviser who only sees them every three weeks. Today: assessed → course list → silent weeks. The plan often dies in the gap. This quarter you can point at it: about 700 contractor roles gone (Covalen / Meta). Scale: 182,517 on the Live Register (Aug 2026) — already counted, often already assessed, still leave with a list. WHAT THEY DO INSTEAD • Wait for the next appointment. • Ask ChatGPT — more lists. • Another course catalogue. • Big HR software that takes months to install. Not this office. OPEN: one adviser to say this in their own words.	3 SOLUTION FOUR STEPS IN ONE SITTING 1. Confirm — their CV. Only keep what they say is true. Skip is fine. 2. Questions — two or three. A weak line becomes a story (a number, a tool, a date). 3. Two jobs they can actually reach. They pick. One real Irish course if a skill is missing. 4. The board — they walk out holding it: stories, likely questions, one step this week. We don't take the adviser's meetings or job board. We fill the weeks until they meet again. OPEN: live site is still a mock — skillsatlas.vercel.app	2 UNIQUE VALUE PROP “Everyone else hands you a list. We hand you proof.” Proof = two jobs you can already reach, in your own words, plus a board you take into the interview. For the office: we don't replace what you run. We make the weeks between appointments count — and you have something to show for it. The adviser spends less time re-explaining the same CV. Not a jobs website. Not a test. Not a ranking of people. They choose. OPEN: say this in one breath with the presenter. Success = they come back holding a board they wrote.	7 UNFAIR ADVANTAGE WHY THIS ISN'T JUST CHATGPT Nothing is used until they say yes. We work from one CV, in one sitting. Big HR tools need months of company setup first. The board only prints what they confirmed. We will not invent a story for the interview. Honest: a big company could copy this. We start with small offices that still hand out a printout. What gets hard to copy is real results from those sittings — we don't have those yet. OPEN: one adviser who will sit with us.	1 CUSTOMER SEGMENTS THE PERSON Their job is gone or about to go. THE OFFICE (who pays) The small employment office that already sees them. The person does not pay. First door: that kind of office in Ireland. A conversation is open — not a signed customer. The other large office in the same system is the next call. Later, same four steps: a training programme or a union room. Not first: big-company HR, or an app people buy. OPEN: name one adviser this week. Write down what they said. Don't put their logo on a slide as a customer.
	6 KEY METRICS TODAY A four-screen mock and a live link. No one is paying. A real conversation beats a logo wall. WHAT WE COUNT People who leave holding a board. Plan: 10 in one sitting → 20 when that office copies → 200 as more small offices copy. Not app downloads. Success: they come back to the next appointment with that board. OPEN: did the questions make the story stronger? Did they start the course?	4 CHANNELS THIS YEAR — IRELAND Show it. Sit with one adviser. That office copies. Other offices hear from them. Not ads. Not a national contract. Same four steps in a training programme or union room — only the spoken sentence changes. NEXT YEAR Same sitting abroad. Change the course list. Keep the four steps. OPEN: first office outside Ireland — later. No invented market size.		
5 COST STRUCTURE NOW A two-week challenge team. Practice CVs, not real people. Cheap to run one sitting. LATER Teach the office. Keep the course list current. Cost of running many sittings. Extra care when real people's details are involved.		5 REVENUE STREAMS The person does not pay. Today: free, one group. Did they come back with the board? Then: the office pays per sitting or per adviser. Price after we see it work. Later: same offer in other countries. Same product. Not this month: a paid phone app, or selling inside big companies. OPEN: one office that can try about 20 people without a year of paperwork.
